Direct recessed LED down lights are ideal replacements for traditional recessed lighting. Electrical consumption is about 15% of the equivalent incandescent light, saving energy costs and being good for the planet. The innovative lens and reflectors provide uniform illumination with a minimum of glare. Average lifetime of our LED luminaires is 50,000 hours of maintenance free use. Most designs include a smooth dimming feature compatible with many common dimmers available on the market. Energy Star and cETL compliant and Patented installation make this product ideal for new construction and retrofit applications.

In addition, our products are available with a smart app that works with Google Assistant and Amazon Alexa, or our easy to use mobile APP. Consumers can choose colors, brightness, differing scenes and schedule timing all through their mobile phone or voice control.
